

SQL

Union

what is it?

Using a UNION combines the result of two queries into one column and removes duplicates.

If your query has multiple columns, they need to be in the same order to complete the UNION.

Orders Table	Inventory Table	Result																			
<table><thead><tr><th>order_item</th></tr></thead><tbody><tr><td>Nails</td></tr><tr><td>Hammer</td></tr><tr><td>Screws</td></tr><tr><td>Pliers</td></tr><tr><td>Blow torch</td></tr></tbody></table>	order_item	Nails	Hammer	Screws	Pliers	Blow torch	<table><thead><tr><th>inventory_item</th></tr></thead><tbody><tr><td>Nails</td></tr><tr><td>Hammer</td></tr><tr><td>Screws</td></tr><tr><td>Tool cabinet</td></tr><tr><td>Nail gun</td></tr></tbody></table>	inventory_item	Nails	Hammer	Screws	Tool cabinet	Nail gun	<table><tbody><tr><td>Nails</td></tr><tr><td>Hammer</td></tr><tr><td>Screws</td></tr><tr><td>Pliers</td></tr><tr><td>Blow torch</td></tr><tr><td>Tool cabinet</td></tr><tr><td>Nail gun</td></tr></tbody></table>	Nails	Hammer	Screws	Pliers	Blow torch	Tool cabinet	Nail gun

SQL

Union all

what is it?

The UNION ALL combines the results of two queries the same as a UNION but keeps the duplicates in the result.
